Name:

Hunt 4 the C2

Message:

You are provided a process memory dump of a simple remote shell that takes client message as a Windows command and execute it. The result of the command is then sent to the C2. The mission should you choose to accept is to identify a flag sent to C2.

https://cyberseagame2025.s3.us-east-2.amazonaws.com/Resources/CSG2025_Reversing_Challenge.zip

Objective:

Retrieve the flag message sent to C2.

Instructions:

The remote shell has following capabilities.

1. Construct message (in this case the flag string)
2. Encrypt using AES
3. Send the message to an event at Google Calendar (C2)

By analyzing the binary, you will find

- Gmail for the Google Calendar: schmit.19800206@gmail.com
- Encrypted AES Key: 1002284436093a572e2b19343d0227392b3e25272228363d26320d3e33283916
- Encrypted IV: 173c02430e092a121c3520172939025a3c1210100e215158
- xorKey: simplekey

You need to request access for the Google Calendar to access the encrypted flag, which is stored in an event on the 18th of Oct 2025.

Once the encrypted flag is retrieved, all you need to do is decode the AES key and IV with xorKey and decrypt the flag.

- Decoded AES Key: rA8fT6YzX2pQ4eM9vW1kLdB3
- Decoded IV: uJ7nP0xR3aH5bG2q

- Decrypted Flag: !aB3@dE5#fG7^hI9&jK1*lM2(nO4)pQ6-rS8_tU0+vW
